

## RV-MARINE-X

### Advanced Marine Protection for X-Series Cameras and Accessories.

The Extra Marine X-SERIES and accessories have a corrosion resistant hard anodized plated finish. All steel accessories are treated with a bright zinc protective finish.

Dual Paint technology from Interpon is applied to the protected metalwork. Stage 1 is a protective barrier primer designed to give enhanced corrosion resistance of aluminium and mild steel. Interpon Gloss finish is an ultra durable gloss coating conforming to the requirements of EN 12206 and EN 13438 (High Durability systems)

The Extra Marine X-SERIES is white to reflect sunlight (other colours available to special order). The combination of using ultra durable white paint and its Dome Cover, which acts as a sunshield, helps to reduce extremes of temperature in direct sunlight. Conversely, the dome cover also provides a level of insulation in cold environments and additional protection to the dome mechanism in marine applications.

Furthermore, all the pan, tilt and wiper mechanisms and shafts in the Extra Marine option are built from marine grade stainless steel, increasing corrosion resistance, toughness and durability.

The Extra Marine camera is suitable for oil rigs, sea ports and terminals, coastal locations and many specialist industrial applications.

#### Specification

Alloy Casting plating	Hard Anodized
Mild Steel plating	Bright Zinc
Pan,tilt wiper shafts	316 marine grade stainless
External fixings	316 marine grade stainless
Wiper Blade	Silicone
Primer	Interpon Epoxy Primer
Top Coat	Interpon Polyester Gloss 90
